ABOUT ME

Detail-oriented IT & Management undergraduate at the University of Moratuwa with experience in MERN and Spring Boot development. Skilled in manual testing, API testing using Postman, and writing structured test cases. Seeking an Associate QA Engineer role to contribute to software quality, test automation, and reliable user experiences.

EDUCATION

B.Sc. (Hons) in Information Technology and Management

2022 - 2026

Faculty of Information Technology- University of Moratuwa

GPA-3.26

Advanced Diploma in Business Management

2021 - 2022

National Institute of Business Management (NIBM)

Completed with a Distinction

G.C.E Advance Level

2017 - 2020

R/Eheliyagoda Central College

Physics - C , Chemistry - B , Com. Mathematics - C General English - B

WORK EXPERIENCE

Software Engineering Intern — SLT-Mobitel(Digital Platform Division)

April 2025 – October 2025

Completed a six-month internship contributing to full-stack development across an advertisement module, enterprise portal revamp, and biometric authentication system. Worked with React, Node.js, and Spring Boot, gaining experience in API and security testing (OWASP ZAP), Agile practices, and team-based development. Participated in weekly reviews and supported project documentation and handovers.

SKILLS

- **Testing Types:** Manual Testing | Functional | Regression | Smoke | Sanity | Exploratory | UI Testing | API Testing | BDD (Behavior-Driven Development)
- **Testing Tools:** Postman | Cucumber | Serenity BDD
- **Programming Languages:** JAVA | C | JavaScript
- **Web Technologies:** HTML | CSS | React | Node.js | Spring Boot | JavaScript
- **Database:** MongoDB | MySQL
- **Version Control:** Git | GitHub | Bitbucket
- **IDE :** VsCode | IntelliJ | CodeBlocks
- **Soft Skills :** Analytical Thinking & Problem Solving | Leadership | Team Work | Effective Communication
- **Languages :** Sinhala | English | Japanese | German

PROJECTS

Group Project

[Automated QA Suite for Plant Nursery Web App](#)

BDD-based QA automation framework for the Sales and Plant modules of a plant sales system, covering API and UI testing. Authored automated test cases for functional flows, role-based authorization, and negative scenarios using Gherkin feature files. Validated create, read, delete, unauthorized, and bad-request behaviors within the team framework.

- Role - QA Engineer (Test Case Development)
- Technologies: Java, Cucumber, Serenity BDD, REST Assured, Maven, JUnit
- Github - [Repository](#).

Level 3 Individual Software Project

Tool Time Management System for Gislaved Gummi Lanka (Private) Ltd

Centralized web-based platform for Gislaved Gummi Lanka's mold-making unit with role-based access. Managers add/update mold details, generate reports, and oversee processes. Machine operators track usage and process completion, while admins manage roles, replacing Excel-based tracking with real-time operational insights.

- Technologies: React, MUI, MongoDB, Spring Boot
- Github - [Frontend](#), [Backend](#)

Level 2 Software Project(2023-2024)

Interns Management System(IMS)

The IMS includes user profile management, CV uploads, task tracking, and intern evaluations. Interns can maintain profiles, upload CVs, and record completed tasks. Mentors oversee tasks and provide evaluations. Admins manage user roles and permissions, while evaluators assess performance and give feedback. Management reviews evaluations and reports to ensure an efficient internship process.

- Role-Team Leader
- Technologies: React, MongoDB, Node.js ,MUI
- Github - [Frontend](#), [Backend](#)

Group Project

E-commerce Platform for a Pizza Shop

A modern e-commerce platform designed for online pizza ordering, built using industry standards. The system includes secure user authentication, real-time order tracking, and seamless online payment integration. Developed with a focus on scalability and performance, utilizing Docker for containerization.

- Role - Frontend Developer
- Technologies: React, .NET, MSSQL, Docker
- Github - [Frontend](#), [Backend](#)

Level 1 Hardware Project(2022-2023)

Biodegradable Plate Making Machine from Food Waste

Developed an Arduino Mega-based machine to convert food waste into biodegradable plates, featuring blending, compression, and heating units.

- Technologies : C language , Blender, Proteus 8.0, EasyEDA

EXTRA – CURRICULAR ACTIVITIES

Moraspirit initiative

member of video editing and streaming pillar

IEEE Student Branch of University of Moratuwa

volunteered as a financial committee member in the NFB Championship

Member of SEDS Mora of University of Moratuwa

Member of Hiking Club of University of Moratuwa
